

# Nickel Plating Chips™ (UK)

Nickel Plating Chips™ are a high purity form of nickel specifically designed for electroplating with titanium anode baskets. Chips™ are produced by a unique carbonyl gas refining process at the Clydach Nickel Refinery in the UK.

The controlled and consistent purity of Chips™ and the advantages associated with their distinctive shape make this product attractive for general purpose plating with titanium anode baskets:

- Carbonyl refining produces the purest form of nickel available.
- Unique shape prevents the formation of bridges and voids in the basket.
- Settles uniformly in basket, ensuring uniform current density and high quality deposits.
- Flows easily into regular baskets with standard mesh sizes.
- Safe to handle (no sharp edges).
- Dissolves at 100% anode efficiency in common nickel plating solutions (containing chlorides).
- Proven and trusted by the world's leading electroplaters.
- Carbon intensity is 33.1 t CO<sub>2</sub>e/t Ni, including scopes 1, 2, and 3 (upstream) emissions as of the most recent assessment year (2020). Carbon intensity is reassessed on a regular basis.

Chips™ are produced in compliance with the following standards: ISO 9001:2015, ISO 14001:2015, and ISO 45001:2018.

## Product Description

### Form

- Disc-shaped pieces of nickel
- Diameter: approximately 18 – 22 mm
- Thickness: approximately 4 – 5 mm

### Packing Density

- Approximately 5.0 g/cm<sup>3</sup> of basket capacity

### Packaging

- 10 kg bags — 5 bags per box, 20 boxes per pallet (1,000 kgs net weight)

### Typical analysis (wt %)

Ni*	>99.98
Co	<0.0002
Cu	<0.0001
C	<0.007
Fe	<0.004
S	<0.0002
Pb	<0.000003
Zn	<0.0002

\* Nickel determined by difference.
